OVERVIEW

In the current market there is another masternode project with a trade bot that has been in existence for over 10 months.

This project came on to the scene with promises of 6000% and some unsubstantiated claims of producing these results. The bot uses high risk leverage trading and has failed to deliver. It is thought that this has been an elaborate plan to entice investors to put their money in and buy time until they possibly could develop a bot that works.

The trading pool bot is different in that it doesn't make wild exaggerated claims of 6000% ROI or use high risk trading with investors capital to gain more investors.

The trading pool strategy risk management means that, it would take a high number of consecutive losses to bankrupt the funds pool and as it is designed to steer clear of coins that are more susceptible to market manipulation, this would be very unlikely to happen.

"The trading pool bot is different to anything else on the current market and should not be compared or confused with others."

INTRO

Trading Pool Coin came into existence after a series of unfortunate scams by "redacted" coin who promised to make a trading pool which would provide a generous return for its investors. In further fraudulent activity, "redacted" coin entered into a partnership with a large "redacted" service to give them more credibility with potential investors and their plan worked when many investors deposited large amounts of funds which resulted in substantial losses when redacted coin failed to fulfil their promises.

The Trading Pool team initially offered to help by developing a trading bot for the "redacted" coin's platform but their offer was refused with the comment "if you can make a trading bot that works then why would you not make it for yourself? So that is exactly what they did and the Trading Pool project was born with the creation of the trading bot.

When the trading bot was first created, it was rigorously tested for over 2 months before the team went public and presented it to investors. The bot has now been running for over 3 months with an average 20%+ return for its investors. It has now been decided to take the project to the next level with the introduction of masternodes to provide a passive income for investors and as a means to obtain further benefits from the profits generated from the trading bot. The revenue from the sale of the presale masternodes will be used to develop the trading pool so as to simplify the process of investment with full transparency for investors.

The trading pool bot is the first utility and this provides the masternode project with a 0 day working product. It is normally rare to be given the opportunity to invest in a working and proven system and presale masternodes will be limited until the full exchange launch of the TPC coin.

Other utilities are planned with the DApps Hub soon to follow.

ABOUT THE TRADING BOT

Just over 6 Months ago back in June 2019 the team were created and got to work on a strategy that they could sell to investors to provide a passive income. Everything fell into place quickly and the bot was tested in private for over 2 months. The team have adapted a low risk strategy which has worked with great effect and even in the recent very tough market conditions, the bot has been returning an average of 12-15% monthly profit.

The trade bot has been built with the use of various oscillators, such as MACd RSI, MAs and a number of other technical indicators. It trades coins on Binance and only trades btc/alt pairs. It doesn't trade BTC/USDT pairs and will only choose coins that have specified range with upper and lower trading volumes to be met. The bot has a 60%+ strike rate and will only use a percentage of the funds from the available portfolio when a trade occurs due to its built-in risk management rules, resulting in a low percentage of trade losses. When a buy signal occurs, the script will run on TradingView and use 3commas trading bot which will initiate the trade using the Binance api. The strategy used is a closely guarded secret and the core fundamentals of the success of the trading bot. SL (stop loss) is always in place for all trades.

An Example of risk management: The trade bot took a VET coin trade which did 30% in profit however due to the use of risk management, the bot closed the trade with 20% (without using the whole portfolio).

The team make it clear that the trading pool project are not promising a "get rich quick scheme", but instead a rewarding passive income through the use of their lower risk strategy bot trading.

Current structure of monthly fees applied to all profits.

0% fees for all profits equal or below 12%

2% fees from 12.01% - 19.99%

4% fees for profits equal to or above 20%

Fees subject to change.

The fees charged will be used for buybacks and other purposes.

(Full explanation can found below in "Usage and Purpose")

TPC USAGE AND PURPOSES

TPC Coin will be used as the currency of the upcoming platform, as well as in addition to BTC for all products and services. It is worth noting that all subscription and service fees paid in BTC will be used for buybacks of the TPC Coin on exchanges. Holders of TPC Coin will receive loyalty bonuses in the form of free TPC Coins and other benefits and rewards, such as 0 trading fees.

BUYBACKS

For the first 3 months, 60% of profits obtained from trading bot fees will be used to buyback coins from the markets. It is estimated there should be a buyback volume of \$5,000- \$10,000 each month.

Following a successful presale, all surplus funds will be added to the trade bot, with profits earned to contribute with further market buybacks and support on the market.

The goal is to develop and release the second utility within 3 months of the end of presale, to provide more income sources and use cases for the TPC Coin. After the first 3 months buybacks are expected to be lowered to 30% due to the anticipated additional funds generated from the second utility, however as the goal is to continue with \$5,000-\$10,000 of buyback volume each month, this would be supplemented further from the profits generated, to try to maintain buybacks we set as the goal.

MARKETING

The trading pool team believe strongly in marketing for the initial launch and success of their business and for this reason a substantial budget from the presale funds will be allocated for marketing purposes. These will include listings for branding and exposure and funding to drive targeted website traffic to their specific landing pages with the focus on growing their customer base for a large market share.

DApps Hub

As you could already be aware, there are many DApps but there is no platform or location that allows you to browse or learn more about all the legit DApps. The trading pool team are aiming to change that with the launch of the DApps Hub, to bring together all the DApps and allow users to discuss and communicate with other DApps members.

Other Utilities

Other future utilities could include multi-asset betting and lottery platforms.

COIN SPECS

TPC Specification:

Coin name	TP Coin
Ticker	TPC
Algorithm	QUARK/PoS
Block reward:	Variable (TBA)
Masternode Collateral:	1000
Staking (POS) reward	1 %
Operations Fund	10 %
Block Time	120 SECONDS
Minimum Staking Maturity	12 hours
Total supply	21 000 000 TPC
Premine:	100 000 TPC (0.47%)

PRE-MINE AND LOCKUP INFO

All coins bought in presale before the opening of the exchange will be frozen in the CRYO program from VAULT Investments for a period of 6 months, countdown initiated on the opening day of the exchange. Rewards generated from the initial collateral can be withdrawn as normal or reinvested for maximum growth. Any coins reinvested will still be unfrozen and can be withdrawn at anytime.

Blockchain start up breakdown as follows

37,000 sold in Masternodes, or split for 10% shares

8,000 To be distributed for project owners

5,000 For giveaways and promotions

50,000 Total TPC (50% of Premine)

The CRYO program's unsold strategy will be used to ensure a total of 50 mastenodes will be launched at the end of presale with a guaranteed ROI of 200%. To be held until the opening on the first exchange.

The remaining 50,000 Premine which will only be sold on OTC above market rates, or used for ice drops or bonuses and frozen on the platform under the terms of the CRYO program.

There will be a sales **HARD** cap of **37,000** in total, presale to include all Masternodes split for shares.
